

HLR 5000

Pressure Sensor Assembly

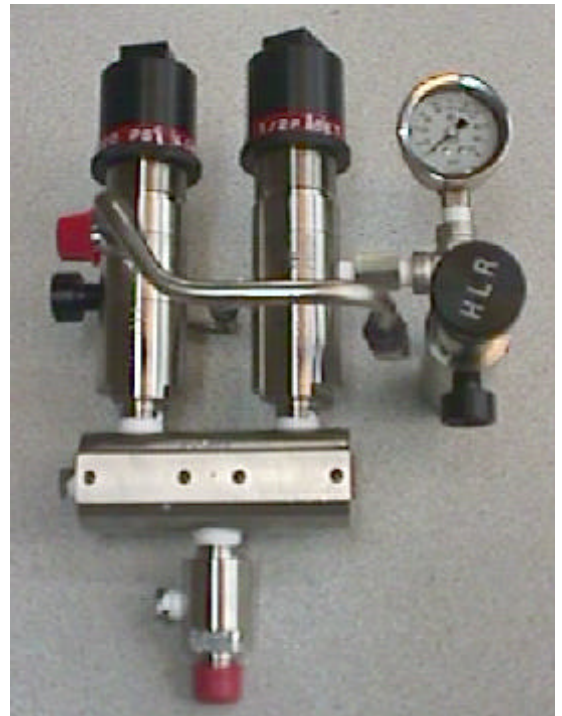

“TURN-KEY” SINGLE WELL SAFETY SYSTEM!

In response to recent customer demands for speed and ease of installation we are offering this turn key unit. HLR Controls has taken a **7970P100 Pressure Sensor Set (PSHL)** and an **HLR 150-14 Manual Reset Relay** and tubed it up in a typical single well hook-up configuration. This allows you, the customer, to simply take the unit to a location and screw it into an isolation valve or process connection. You then hook up the Inlet and Outlet connections to put it in service. **The HLR 5000 will reduce the time and materials needed to get the well online.**

Since the HLR 5000 is a turn-key assembly, it eliminates the need for purchasing and stocking tubing, tubing fittings, connections and gauges.

Purchasing the 5000 will also reduce customer cost and overhead by eliminating labor involved in tubing up the individual components.

The elimination of the low pressure regulator also provides a cost savings and eliminates the potential problem of a malfunctioning component. This unit can operate with a 125 PSI supply pressure and eliminate the need for a low pressure regulator.

QTY PART NUMBER - DESCRIPTION

- 1 HLR 7970 - 10 - 10,000 PSI Pressure Sensor PSL
- 1 HLR 7970 - 10 - 10,000 PSI Pressure Sensor PSH
- 1 HLR 8130 Manifold for mounting Pressure Sensors
- 1 HLR 150-14FM - Manual Reset Relay with latch pin
- 1 HLR 8131 - 1/2" NPT Male X Male Test Nipple
- 1 0 - 200 PSI liquid filled SS Gauge
- 2 1/4" NPT stainless steel plug
- 1 1/4 x 1/4 male elbow
- 1 1/4 x 1/4 male straight connection
- 1 3/8 x 1/4 male run tee
- 1 3/8 x 1/4 male elbow
- 1 1/4 x 1/4 street tee
- 1 1/4 x 1/4 male hex long nipple
- 4" x 1/4" stainless steel welded tubing
- 1' of 3/8" stainless steel welded tubing
